ARCHER AVE. & LEO ST.

CHICAGO, ILL.

PREFACE.

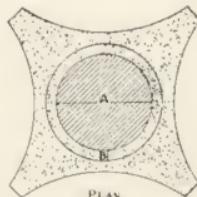

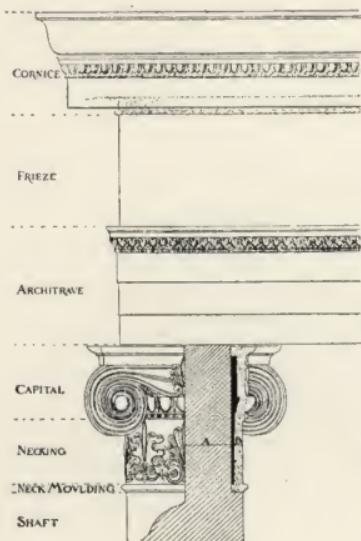

THE ever-increasing demand for capitals, the crowning detail of columns for exterior and interior use for refined architectural structures, has prompted us to issue this exclusive book of Capitals and Brackets, which we manufacture in the different materials, viz.:—

1. Exterior composition.
2. Interior composition in connection with woodwork.
3. Fibrous Plaster in connection with plaster finish.

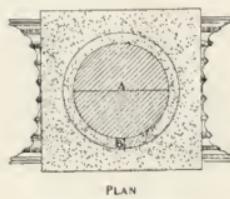

We point with pride to the fine examples of Capitals and Brackets as illustrated in this catalogue, ranging in style from the Grecian and Roman classics, the mediæval ages, to the different periods of Renaissance as practiced most successfully by the Italians, the French, and our modern architects. We have aimed to bring forward in this book a great number of correct specimens of those periods to enable the architects and builders to select the nearest example to the requirements of their building from our large stock of models, which will admit of getting, at a very reasonable cost, the exact desired result. The different materials we have heretofore mentioned are so inexpensive that even the simplest building need not go without the refinement of a few of our Capitals, be it either on the exterior or interior (consols, sideboards, mantels, door and window trims, etc.). We respectfully request architects to kindly specify our Capitals and Brackets as illustrated, mentioning our number and size on plans, and the trouble and time making details will be avoided, as well as the increased expense for executing special models. One trial with us will convince the profession that our goods fully come up to the highest standard. We have made this part of our business a special study for years, and claim we have the correct knowledge of the design, material, and architectural uses of Capitals and Brackets. We will at any time submit samples to architects or builders who desire to give our goods a thorough test, and have the confidence to count those among our customers who have tested the merits of our products.

THE DECORATORS SUPPLY CO.

We have copyrighted all the designs in this catalogue to protect ourselves against reproduction without our permission.

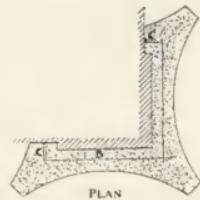

ANGULAR ABACUS COLUMN

SQUARE ABACUS COLUMN

ANGULAR ABACUS PILASTER

ANGULAR ABACUS CORNER PILASTER

A indicates the core, or extended shaft running through Capital.

B shows the thickness of our material.

C indicates the return of pilaster Capital, which always must be mentioned in ordering pilaster Capitals.

EXPLANATION AND INSTRUCTIONS.

THE opposite page illustrates one of our Modern Ionic Capitals with necking, "Empire," as applied to a column showing the wood shaft and core running through the Capital supporting the entablature above. The plans of the different abacus forms as given will serve as a further illustration of the relative position of shaft and our material. All our Capitals are furnished as shown in the catalogue, each Capital having a complete finish to connect with shaft. The diameter given in catalogue represents the top of column. The width represents the top of pilaster. The height given is the exact height of Capital. Always allow a trifle more height for your core, so the weight will rest on shaft, and not on Capital— $\frac{1}{8}$ of an inch up to a 10-inch diameter, $\frac{1}{4}$ of an inch above that size, will be sufficient to insure a safe application.

The thickness of our material is 1 inch up to a 10-inch diameter Capital, making the core of a 10-inch diameter Capital 8 inches; of an 8-inch Capital, 6 inches. Above 10 inches allow $\frac{1}{8}$ of an inch more for the thickness of material for every 2 inches of increased size, making core for a 14-inch diameter Capital $11\frac{1}{2}$ inches; a 16-inch Capital, $13\frac{1}{4}$ inches, etc.

In ordering Capitals, give name, number, and size of diameter of width. Also state material wanted, viz.:

Exterior composition, warranted to stand in any climate.

Interior composition, made with grain to match any wood, having a solid wood body, requires no core on column. Always state the kind of wood and finish.

Fibrous plaster used in conjunction with interior plaster finish.

The sizes of our brackets given are.

1. The entire width across abacus moulding.
2. Width of face on body without moulding.
3. Drop or length.
4. Projection.

We are constantly adding new sizes to our stock, and will make any sizes desired not listed, upon special request, and also carry a number of odd styles and sizes of Capitals and Brackets, designs of which will be sent on application. Special designs submitted will receive correct and careful execution.

Should above printed descriptions be insufficient, write for designs.

Above made in exterior composition; also plaster for interior only.

All Capitals and Brackets listed under the heading Exterior can also be furnished for Interior plaster finish at same price.

IN presenting this catalogue to the trade, we wish to emphasize the fact that the kind of goods shown herein are only a small percentage of our productions. As we embody the different articles we manufacture in separate catalogues, we have refrained from illustrating any other in this book, and therefore mention here the different branches of our manufacture, viz.:

1. Exterior composition.
2. Interior fibrous plaster in connection with plaster finish.
3. Interior composition in conjunction with woodwork.
4. Grille work.

Exterior composition is used very extensively for the ornamental features of buildings, and for that purpose has taken the place of much more expensive materials. It is very durable and easily applied. It combines with a very low price a very artistic finish. Its manifold uses for Capitals, Brackets, Cornices, Friezes, Panels, Arches, Shells, and Gables fill a constantly increasing demand by the profession. We can refer to a great number of fine buildings beautified by us with this class of goods.

The interior decorations of public buildings, theaters, churches, and residences of to-day require a great deal of relief ornamentation for their refined finish. The manufacture of these goods made of fibrous plaster forms a great part of our business. The immense possibility of this inexpensive material as a decorative medium has made it stand foremost in the minds of architects searching for an ornamental finish at a reasonable cost. No up-to-date building can lay claim to any architectural or decorative prominence without a liberal use of this class of ornamentation in its interior. This part of our manufacture is immensely increasing as the nature of it becomes more and more understood. We can proudly claim hundreds of architects that have made use of the possibilities of these goods, and cannot say too much in praise of it. We have issued a special catalogue for interior ornamentations, which contains on its 180 pages several thousand illustrations, showing every form or style of ornaments known to history. We devote special catalogues to this class of work.

The interior composition we have several times referred to in the preface forms quite a part of our output. When properly applied and finished will give exactly the same results as wood carving, having the same grain, when filled represents any wood used, as oak, mahogany, birch, etc. It would deceive an expert to distinguish the fine examples of this class of goods in our show rooms from wood carvings. Our thousands of models, running in style through all architectural periods known, enable us to make almost any conceivable design to imitate wood carving on interior woodwork, such as windows and door trims, sideboards, consols, mantels, etc. The very fact that this material is so inexpensive has made it possible that almost any building has a liberal amount of this ornamentation distributed all over its interior wood finish. We cannot say too much of its merits as a decorative medium on woodwork, and would like to invite the trade to make a trial with it in order to be convinced.

We have issued a special catalogue of fret or grille work, which has stood the criticism of the best people using this kind of ornamentation for beautifying houses. We would like it understood that we aim to manufacture this article in any design and style to meet the general scheme of the interior decoration. We finish these goods in any color or wood. A fine grille is always a highly desirable ornamentation for openings between rooms. We justly lay claims to the distinction of being the foremost people in this country in the manufacture of these goods.

In conclusion, we wish to state that our range of manufacture covers almost every conceivable relief ornamentation known to the art of architecture, except in stone and metal. For this class of work we, however, furnish the models necessary.

We respectfully invite all interested in the ornamental arts of building to visit our establishment, to be convinced that we are the largest and most advanced manufacturers of relief ornamentation in its various branches in the United States.

THE DECORATORS SUPPLY CO.

We have excellent facilities for furnishing special designs quickly. Estimates given on application.
